

instead of:

$i=1$	$n8+1$	$n14$
$i=2$	$n8+2$	$n14$
$i=3$	$n8+4$	$n14$
$i=4$	$n8+8$	$n21$
$i=5$	$n8+16$	$n32$
$i=6$	$n8+32$	$n42$

we have:

$n14$
$n21$
$n32$
$n42$

and calculate as needed:

$$n14 \rightsquigarrow i=3$$

$$n21 \rightsquigarrow i=4$$

$$n32 \rightsquigarrow i=5$$

$$n42 \rightsquigarrow i=6$$

new node must prove it has a spot in the table

ex: new candidate $n10$

calculate $\rightsquigarrow i=2$ would be its highest position on table

does not conflict with pre-existing entries
